PROFILE SUMMARY

Entry-level Cloud & DevOps Engineer with a BCA degree and AWS Certified Cloud Practitioner credential. Hands-on experience in designing AWS cloud architectures, building CI/CD pipelines, and implementing infrastructure as code using Terraform. Experience in containerization with Docker and Kubernetes, Linux, and cloud security best practices. Eager to contribute to DevOps automation, cloud infrastructure optimization, and reliable production deployments.

CERTIFICATIONS

- **AWS Certified Cloud Practitioner**

TECHNICAL SKILLS

- **AWS Cloud:** EC2, S3, RDS, VPC, IAM, Application Load Balancer, Auto Scaling, SNS
- **Version Control :** Git, GitHub
- **CI/CD & DevOps Tools:** Jenkins, SonarQube, AWS CodePipeline, AWS CodeBuild
- **Containers & Orchestration:** Docker, Kubernetes
- **Infrastructure as Code & Automation:** Terraform (modules, validation, planning, state management), Ansible (Playbooks, Roles, Inventory, Vault)
- **Monitoring & Observability:** Prometheus (Metrics collection), Grafana (dashboard visualization), AWS CloudWatch
- **Operating Systems & Scripting:** Linux, Windows, Bash/Shell scripting, Python
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, VPN basics, Subnetting, Routing, Load Balancers, Firewall

PROJECTS

Automated CI/CD Deployment of a Scalable 3-Tier Application on AWS: *Dec-2025*

Technologies: AWS CodePipeline, CodeBuild, CodeDeploy, EC2, ALB, Auto Scaling, RDS MySQL, S3, IAM, VPC, CloudFront, GitHub

- Created a CI/CD pipeline using GitHub, AWS CodePipeline, CodeBuild, and CodeDeploy to enable continuous delivery of a web application.
- Architected a highly available 3-tier architecture across two Availability Zones using Application Load Balancer, Auto Scaling (2–6 instances), and Multi-AZ RDS MySQL.
- Applied AWS security best practices including VPC public/private subnet separation, IAM least-privilege roles, security groups, and encryption at rest for RDS, aligned with the AWS Well-Architected Framework.
- Configured Amazon CloudFront for efficient static content delivery and Amazon S3 for application asset storage.

DevSecOps CI/CD Pipeline Using Jenkins: *Jan-2026*

Technologies: Jenkins, Docker, Kubernetes, GitHub, AWS EC2, Security Scanning (SonarQube, Trivy, OWASP)

- Built a CI/CD pipeline using Jenkins and Docker to streamline build, test, and deployment processes for a containerized application.
- Added automated code quality and security checks into Jenkins pipelines using SonarQube, OWASP Dependency-Check, and Trivy to identify issues during early stages of CI/CD..
- Built Docker image build and release workflows targeting a Kubernetes cluster to support secure and scalable application delivery.
- Configured pipeline stages for build, test, security scans, and deployment, with notifications triggered on security gate or pipeline failures.

EDUCATION

Bachelor of Computer Applications (BCA) - Berhampur University, Odisha.

[2022 - 2025 || CGPA:8.9/10]
