AWS Certified Cloud Practitioner | Cloud Engineer

PROFILE SUMMARY

Entry-level Cloud & DevOps Engineer with a BCA degree and AWS Certified Cloud Practitioner credential. Hands-on experience with AWS cloud architecture, CI/CD pipelines (Jenkins, GitHub, AWS CodePipeline), and infrastructure provisioning using Terraform. Strong foundation in Linux, Docker, Kubernetes, and cloud security best practices. Seeking a Cloud or DevOps Engineer role focused on automation, scalability, and reliable deployments.

CERTIFICATIONS

AWS Certified Cloud Practitioner

TECHNICAL SKILLS

- **AWS Services:** EC2, S3, RDS (Multi-AZ), VPC, IAM, API Gateway, Lambda, DynamoDB, CloudFront, Auto Scaling, Application Load Balancer, CloudWatch
- **DevOps & Automation:** CodePipeline, CodeBuild, CodeDeploy, Terraform, Ansible, Jenkins
- **Containers & Monitoring:** Docker, Kubernetes, Prometheus, Grafana
- **Version Control, Scripting & OS:** Git, GitHub, Bash, Python, Linux, Windows
- **Networking:** TCP/IP, DNS, HTTP/HTTPS, subnetting, routing, load balancing

PROJECTS

Automated CI/CD Deployment of a Scalable 3-Tier Application on AWS:

Jan – Feb 2026

AWS CodePipeline, CodeBuild, CodeDeploy, EC2, ALB, Auto Scaling, RDS MySQL, S3, IAM, VPC, CloudFront, GitHub

- Engineered CI/CD pipeline integrating GitHub with AWS-managed build and deployment services, enabling continuous integration on each code commit.
- Architected highly available 3-tier architecture across two Availability Zones using Application Load Balancer, Auto Scaling (2-6 instances), and Multi-AZ RDS MySQL.
- Applied AWS security best practices including VPC public and private subnet separation, IAM roles and security groups following least-privilege access, aligned with AWS Well-Architected Framework.
- Configured Amazon CloudFront for efficient static content delivery and Amazon S3 for application asset storage.

DevSecOps CI/CD Pipeline Using Jenkins:

Dec 2025 – Jan 2026

Jenkins, Docker, Kubernetes, GitHub, AWS EC2, Security Scanning (SonarQube, Trivy, OWASP)

- Created comprehensive CI/CD pipeline using Jenkins and GitHub to systematize build, test, and deployment workflows, reducing manual deployment effort by 60 percent.
- Integrated automated code quality and security checks into Jenkins pipelines using SonarQube, OWASP Dependency-Check, and Trivy to identify issues during early stages of CI/CD.
- Built Docker image build and release workflows targeting Kubernetes cluster to support secure and scalable application delivery.
- Executed multi-stage CI/CD workflow to enable continuous build, test, and security scanning, improving deployment reliability.

KEY ACHIEVEMENTS

- Planned and deployed 2 end-to-end AWS cloud applications using managed services.
- Hands-on experience across 18 plus AWS services spanning compute, networking, storage, and DevOps.
- Applied CI/CD automation resulting in 80 percent reduction in deployment time.
- Maintained GitHub repositories with infrastructure code, deployment scripts, and documentation.

EDUCATION

Bachelor of Computer Applications (BCA)

Aug 2022 – May 2025

Science College (Autonomous), Hinjilicut, Berhampur University, Odisha

CGPA: 8.9 / 10
